Raven Euro LTD is a European company based in Burgas, Bulgaria (EU). Our main line of business is the manufacturing of premium grade carbon fiber stocks for hunting rifles. Our current products - carbon fiber stocks for Blaser R8 and R93 rifles - are rather well-known in Europe and have proven themselves as ideal stocks for both hunting and long range shooting. We have been manufacturing rifle stocks for over 10 years and we are proud to say that in that time we haven't received a single warranty inquiry or complaint about factory defects.

Our factory is fitted with high-end CNC machinery, and we have the ability to do all the metalwork in house without being dependent on any subcontractors. Having our own R&D division grants our company the possibility to work as an OEM manufacturer and handle all the work of designing any custom style stock and incorporating it into serial production as well.

We use highly advanced aerospace grade technology, utilizing prepregs and high heat and pressure processes when producing our stocks, allowing for the most stable and repeatable result. These technologies and materials are top of the line and currently are the best available on the market.

Our stocks are of a monocoque construction with very high twist and turn resistance, no play, no flex, no wobble. This "enclosed" construction has an edge over "open" or

"U-shape" stocks, which many other manufacturers produce. All internal parts are hidden, meaning an owner sees only the sleek carbon structure of the barrel channel with a matte finish; both effective and beautiful. This type of construction is extremely rigid, efficiently distributing the load over the entire surface. As an option to personalize a stock, we offer not only the standard carbon finish, but also our recently developed Carbon Camo finish – a hand-laid camouflage-like pattern that, due to individualized camouflage patterns, makes every stock appear different and unique. The inlets for actions are made from an epoxy compound to reinforce the internal structure of the stock and CNC cut and machined to size to ensure perfect and correct placement. We reinforce locally high-load areas like pillar zones, recoil lug areas or action mount zones to increase their durability and strength to use with Magnum calibers.

The stocks can be fitted with a variety of sling studs and bipod adapters, such as Picatinny rails, Spartan Precision adapters and Harris studs. We can, upon request, install our ARCA adapter and a wide array of recoil pad adjustment mechanisms of our design and manufacture, giving the shooter the possibility to adjust the recoil pad either vertically, or adjust the length, or have both adjustments in one mechanism. The mechanisms are button-operated and give a good array of adjustments, with the idea of maintaining a lightweight stock. We also feature a button-operated adjustable cheek mechanism, designed and manufactured in our stocks.

Raven Euro MT30 for Tikka T3/T3x – a stock designed as a replacement of standard wooden/synthetic factory stock or as a base for a lightweight custom Tikka-based rifle build.

Carbon Camo optional finish – hand-laid camouflage-like pattern that due to individualized camouflage patterns, makes every stock appear different and unique.

Features a negative comb for better recoil management and feel.

Pure right-handed ergonomics
and fast bolt cycle.

A left-handed version is available upon request.

**An ambidextrous version of this model can be made upon request and for bulk orders.*

The grip shape and ergonomics are ideal for both precision shooting from a position or snap shooting.

Factory Light, CTR, Varmint
and Proof Research Tikka Pre-fit barrel.

**Custom barrel contours are available for this design upon request and for bulk orders.*

No bolt release issues. Raised comb designed to work with optics.

A comfortable grip for precision shooting and control
of the gun even while wearing gloves.

Pure carbon fiber monocoque construction shell with optional PillarBlock system,
which removes the need for glass
and pillar bedding; titanium (Grade 5) recoil lug included.

CNC machined internals, filled with special epoxy compound
for best action seating and rigidity.

Bottom of PillarBlockis in CNC milled for alignment
with the trigger guard carbon fiber plane.

A Raven Euro MT30 Aluminum Trigger Guard (7075-T651 alloy, hard anodizing) available as an option; footprint fully compatible with factory Tikka trigger guard and Tikka magazines.

Removable Picatinny 3 slots rail (7075-T651 alloy, hard anodizing).

Bronze metal inlets integrated into construction for installation of sling swivels and Picatinny rail.

Standard carbon fiber finish available.

Weight – from 21.2 oz to 26.4 oz,
depending on modification (600 – 750 grams).

Stock shape works great while shooting from a shooting bag.

L.O.P. – 13.78" (350mm)
Overall length – 31.1" (790mm)

Our stocks are prepared for pillar bedding, with diameters of the holes up to $\frac{1}{2}$ ".

7075 T651 alloy pillars can be included upon request. A recoil lug is not included, but can be ordered separately.

Front and rear sections with holes for pillars
and a recoil lug are made of a reinforced epoxy compound to ensure stability
and precision even with Magnum calibers.

This design can be adapted for any custom action of any footprint upon request and for bulk orders.
