

Raven EURO MT-30 barrel contours

Our MT-30 stock can be ordered for the following Tikka T3x factory barrel contours: **Light, CTR & Varmint.**

Please note that the contour of the stock will have the following gaps (.04"/ 1 mm on the sides, .08"/ 2 mm under the barrel).

IMPORTANT INFORMATION!

- Barrel contour can't be adjusted or reinletted or sanded to fit because of the thickness of the material (1mm maximum). The technology we use is making a monocoque to exact size by placing the inlets, not by machining the material according to barrel specifications.
- If a custom barrel will be used, please measure it and compare to size of factory Tikka barrels and order a contour that has maximum resemblance with factory barrels in critical positions (transition sections and taper section).
- We can manufacture an inlet for a complete custom barrel. Please note that the maximum sizes of the barrel should not be over $\varnothing .87"/ 22$ mm (factory Varmint contour).
- If a custom barrel has the sizes larger than Tikka T3x Varmint factory barrel, consider ordering custom inlet for MT-31 stock.
